

Diamond Growth Machines

NEOCOAT and Socrate Industrie have developed a complete line of machines designed for diamond growth. The full range of CVDiam® HFCVD reactors fulfills all specific needs of customers with several deposition capacities for lab-scale applications, mass production, industrial applications or R&D projects. The CVDiam® MW6 is a microwave machine for high-quality and high-purity single crystal diamond.

Designed for both small and large batches, they offer robust performance, intuitive operation, and the flexibility needed for demanding many applications. For further information, please contact NEOCOAT.
