

Parylene Coating Machines

COAT-X and Socrate Industrie have developed a complete line of machines designed for parylene coating. The CX-series deposition systems (CXP-30, CXP-300, CXP-600) deliver precise, ultra-thin Parylene films with consistent quality and industrial-grade reliability. The CXC-20 is an ALD/CVD Combined Deposition System.

Designed for both small and large batches, they offer robust performance, intuitive operation, and the flexibility needed for demanding medical, electronic, and aerospace applications. For more information, contact COAT-X.
